

The Aggtelek stalactite caves

Extending over 25 km in length, including side entrances, the Aggtelek cave system is the largest in Central Europe. The cave was formed in the 230 million-year-old limestone of the middle Triassic age. The stunning stalactites and stalagmites are the result of dripping water depositing its limestone content to create a fascinating underground landscape of a myriad colours and shapes. The caves inspired their discoverers to come up with dozens of descriptive names, such as Dragon's Head, Tiger, Tongue of Mother-in-Law, Chamber of Columns and Room of Giants.
